The software distributed by Camunda to its customers and users contains components that are subject to Public Software licenses. Public Software means software (including but not limited to any libraries, utilities, or other software programs or components or portions thereof) licensed under any license that provides for free software, source-available software, open-source software, or a similar licensing model.

Some of these Public Software components are subject to licenses that impose certain obligations on Camunda, including the obligation to make the source code of the components available, provide copyright or license text information, or make certain modifications. To fulfil such obligations, Camunda hereby makes the following offer to anyone.

1. Interchangeability of components

Camunda permits its customers to modify the proprietary software for their use in accordance with the license conditions and so-called reverse engineering to "debug" such modifications insofar as the corresponding software components are linked to program libraries that fall under license conditions that require such permission. The customer may not pass on to third parties either the information obtained during reverse engineering or debugging or the modified software itself. Any modification is carried out at the customer's own risk, and Camunda accepts no liability for any resulting errors. Accordingly, Camunda points out to its customers that modifications may mean that the Software can no longer be used for contractually intended purposes.

2. Provision of source code

Camunda will provide its customers (and any third parties) with a copy of the complete corresponding source and/or object code in accordance with the requirements of the applicable Public Software license upon request using the contact details at https://docs.camunda.io/docs/next/reference/dependencies/.

The customer can also contact Camunda at the contact mentioned above if the Customer requires support in exercising a right guaranteed by a Public Software license. If Camunda incurs costs in supporting the exercise of the customer's rights, for example, for the physical transfer of the source code, Camunda can charge the Customer for these costs in the same amount.

Please note that the source code of the Camunda Software is provided to you exclusively under the licenses referenced in the LICENSE file or the License section in the README of the respective source code repository.
